Risk and Reward Profile

The risk and reward indicator

The risk category was calculated using historical performance data and may not be a reliable indicator of the fund's future risk profile.

The fund's risk category is not guaranteed to remain fixed and may change over time.

A fund in the lowest category does not mean a risk-free investment.

The fund is in this category because it seeks to provide rewards whilst limiting price volatility.

Risk factors

The following risks may affect fund performance.

ABS and MBS risk: Mortgage or asset-backed securities may not receive in full the amounts owed to them by underlying borrowers.

Capital risk / negative yields: When interest rates are very low or negative, the fund's yield may be zero or negative, and you may not get back all of your investment.

Counterparty risk: The counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the fund, potentially creating a partial or total loss for the fund.

Counterparty risk / money market & deposit: A failure of a deposit institution or an issuer of a money market instrument could create losses.

Credit risk: A decline in the financial health of an issuer could cause the value of its bonds to fall or become worthless.

Currency risk: The fund can be exposed to different currencies. Changes in foreign exchange rates could create losses.

Derivatives risk: A derivative may not perform as expected, and may create losses greater than the cost of the derivative.

Emerging markets & frontier risk: Emerging markets, and especially frontier markets, generally carry greater political, legal, counterparty and operational risk.

High yield bond risk: High yield bonds (normally lower rated or unrated) generally carry greater market, credit and liquidity risk.

Interest rate risk: A rise in interest rates generally causes bond prices to fall.

Leverage risk: The fund uses derivatives for leverage, which makes it more sensitive to certain market or interest rate movements and may cause above-average volatility and risk of loss.

Liquidity risk: In difficult market conditions, the fund may not be able to sell a security for full value or at all. This could affect performance and could cause the fund to defer or suspend redemptions of its shares.

Operational risk: Failures at service providers could lead to disruptions of fund operations or losses.
